Superior Broadband Acoustic Control

When only the best will do, discriminating audiophiles insist on ASC's Acoustic Soffit System as part of their acoustic treatment package. This is an acoustically engineered product that anybody with reasonable DIY skill can install easily. The best part is that regardless of your interior design, the ASC Soffit fits right in. In a nutshell, you hear much more of the sonic detail produced by your speakers, instead of fuzzy echoes. Plus, the soffit can be part of the room lighting, HVAC vents, all depending on your desire. Suitable for the dedicated high-end listening room, or right in the living room where everybody in the family will enjoy the understated "built-in" look and sonic clarity.

When You Need Serious Bass Trapping

If you own a set of high powered speakers, you'll need the extra bass trapping that every ASC Acoustic Soffit offers. With hundreds of hours of real world testing, ASC's engineering and product development technicians have produced the best acoustical soffit available anywhere. ASC's Acoustic Soffit combines a perfect combination of absorption, diffusion and bass trapping. Choose from 7 in-stock fabric colors, or for a modest additional cost, 60+ custom colors. Standard size is 10" x 16", or choose custom sizing to fit your specific needs and allow for optional wiring, HVAC and lighting.

The Bottom Line

The ASC Acoustical Soffit System is an elegant, one-product solution to improving the acoustics and sonic detail in your listening room. It is reasonably easy to install for anyone with a moderate skill level.
